

Java QAP 2 Questionnaire

1. Hours: ~5
2. Resources: Stackoverflow, Lecture Videos, W3Schools, Java Documentation
3. I did not ask any friends for help.
4. I wanted to ask why we used the long datatype and stored cents and dollars as two different values, seems like it may have made things more complex than they needed to be. Otherwise, things went smoothly.
5. I would give this project a 3/5 in difficulty. There were some things that challenged me, and I had to spend a bit of time researching. I do have a rounding error in my program for the cents. They round up to the nearest decimal in the 10's.
